Brayan Stivens Sepúlveda Molina

Software engineer · AppSec / DevSecOps · AI security

Medellín, Colombia · brayanstivens66@gmail.com · linkedin.com/in/brayansstivens · github.com/BrayansStivens · brayansstivens.github.io

SUMMARY

I have spent more than four years building software and more than two securing it. At Siigo I lead vulnerability management: I automate SAST, DAST, SCA, secret and IaC scanning inside the pipelines so teams fix issues before they ship, and I prioritize by real risk, not alert volume. I work with AI agents every day and know where they fail: I review the code they write and the LLM applications built on them.

Available for freelance projects and consulting in AppSec, DevSecOps and AI security.

APPLIED AI

- **Agentic development:** I build with AI agents such as Claude Code and review every change: diff, tests and a security audit before the merge. Pitangus was built this way.
- **AI-generated code:** I catch the mistakes AI-written code makes most often. Pitangus ships its own rules for them and for Supabase and Firebase access control.
- **LLM applications:** I review LLM, agent and RAG applications for prompt injection, unvalidated output, data leakage and excessive agency, following the OWASP Top 10 for LLM Applications and MITRE ATLAS.
- **Security operations:** At Siigo I use AI to speed up finding triage, report writing and audit evidence collection.

SKILLS

Application security	SAST, DAST, SCA, IaC, secret detection, threat modeling
Security operations	Vulnerability management (TVM), pentest triage, remediation
DevSecOps	GitHub Enterprise, GitHub Actions, CI/CD, shift-left
AI security	OWASP Top 10 for LLM, prompt injection, MITRE ATLAS, AI-generated code
Containers	Docker, Trivy, Grype, Checkov
GRC and compliance	Audit evidence, SOC 2, ISO 27001, regulatory compliance
Development	Node.js, NestJS, React, Angular, Python, SOLID design
Data	PostgreSQL, SQL, NoSQL
Languages	Python, JavaScript, TypeScript, Shell, Go, C#, Java, PHP
IaC	Terraform, Docker, Azure
Tooling	Checkov, Grype, Trivy, Dependabot, Betterleaks, TruffleHog, Opengrep, OSV-Scanner, zizmor, Fluid Attacks
AI	Claude Code and AI agents, OWASP Top 10 for LLM, MITRE ATLAS

EXPERIENCE

SecOps / Full-stack developer · Siigo Mar 2024 — present · Medellín

- Lead the TVM (Threat & Vulnerability Management) and IPY (Information Protection & Governance) domains, aligned with the company-wide security strategy.
- Automated early detection and remediation in the pipelines (SAST, DAST, SCA, secrets and IaC) to shorten each vulnerability's exposure window.
- Integrated continuous scanning with Checkov, Grype, Trivy, Dependabot, Betterleaks, TruffleHog and Fluid Attacks alongside the SRE team.
- Run GitHub Enterprise: access controls, security policies and automated workflows for the engineering teams.
- Manage internal and external pentest reports and drive mitigation plans with development through to closure.

- Streamlined evidence collection for GRC audits and brought AI into finding triage and reporting, always with human validation.

GitHub Enterprise · GitHub Actions · Terraform · Docker · Python · Go · Azure · AI

Software developer · Elite Automation Group Aug 2023 — Mar 2024

- Automated large-scale management of Amazon and Walmart stores through their official APIs, cutting operating time and manual errors.
- Built internal software for warehouse managers and operators in the US: logistics, returns and inventory.

Python · JavaScript · Amazon and Walmart APIs

Software developer · Operación Éxito Colombia Feb 2023 — Sep 2023

- Sole developer at the company: designed, built and maintained all of its custom software.
- Customized Moodle for schools and city halls and built education apps with React, Angular and Spring Boot.

React · Angular · Spring Boot · PHP · Moodle

Developer (internship) · Front-end · Colegio Mayor de Antioquia Mar 2022 — Oct 2022

- Built the Rizomas site, an academic project that gives visibility to women in Latin America: accessible Angular components and .NET services.

Angular · React · .NET

PROJECTS

Pitangus · Spot it. Fix it. Prove it. v0.15 · beta · AGPL-3.0

Security tools warn a lot and prove little. Pitangus is self-hosted, open-source AppSec: it prioritizes what is exploitable, tells you how to fix it and confirms the fix worked, without sending your code anywhere. I designed it and built it with AI agents; it is now published by Arodium, the company I co-founded.

pitangus.dev · github.com/Pitangus-Dev/pitangus

Arodium · Co-founder

A Colombian team building custom software, websites and application security.

EDUCATION

B.Eng. in Software Development (in progress) · Corporación Universitaria Iberoamericana 2025 — present

Systems Technology degree · Instituto Tecnológico Metropolitano (ITM) 2018 — 2024

CERTIFICATIONS

Secure development techniques (2025) · GitHub fundamentals (2025) · Terraform (2025) · Intermediate JavaScript (2024)
